

ISO 14001:2004 Environmental Management System - The Gap Analysis Checklist

GUIDELINES FOR USE OF THE GAP ANALYSIS CHECKLIST

This gap analysis checklist is prepared for use in evaluating your Environmental Management System against the requirements of ISO 14001.

Each requirement is expressed as a question that the auditor can use to evaluate your EMS capabilities. Along with the checklist, you will need to have a copy of the ISO 14001:2004 standard so that you can see exactly what the requirements are and can refer to the guidance section in Annex A.

After you have prepared an audit schedule, and assigned responsibility to the auditors for different areas to audit, copy each section of the checklist for the auditors working with that section. As the auditors work through the checklist, they need to take notes on what is in place, and what needs to be developed.

Reference the procedures or other documents that are reviewed and that will provide information for the new EMS. Take notes on the status of the documents, will they need to be revised for the new system, or can they be used as is? Also note where processes are in place, but documentation is needed.

Focus on what is in place, and what needs to be developed. While you do want to know if procedures and processes are being complied with, compliance is not your main focus for this audit.

Remember that the final outcome of this audit should be a list of things that your organization needs to do to comply with ISO 14001:2004.

ISO 14001:2004 Environmental Management System - The Gap Analysis Checklist

4 ENVIRONMENTAL MANAGEMENT SYSTEM

REQUIREMENTS	CURRENTLY IN PLACE (List documents or evidence)	COMPLIANT YES / NO?	IF NO Estimated % complete	ITEMS NEEDED
4.1 General Requirements				
This clause introduces the general requirements for an environmental management system that is intended to result in improved environmental performance. Look to see that your organization has a system with a defined scope for an EMS that can be reviewed and evaluated to identify and implement opportunities for improvements.				
Has the organization established, documented, implemented and maintained an EMS as required by ISO 14001:2004?				
How does the organization determine if the requirements of the standard are fulfilled?				
Is the scope of the EMS defined & documented? -- are all activities, products and services within the scope addressed by the EMS?				
4.2 Environmental Policy				
This clause addresses the requirement for your organization's environmental policy which is the driver for implementing and improving the Environmental Management System.				
Is the organization's environmental policy appropriate to its activities, products, services?				
Does the policy reflect the commitment of top management to: -- prevent pollution and to continually improve? -- comply with legal & other requirements?				
Does the policy provide for a framework to: -- set & review objectives and targets? -- document, implement & maintain the policy? -- communicate the policy to persons working for or on behalf of the organization? -- is available to the public?
